

DRAWING

FLOWERS

PART 1

Petals

Flower Drawing Course by JeyRam

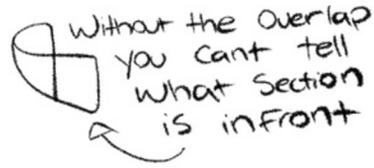

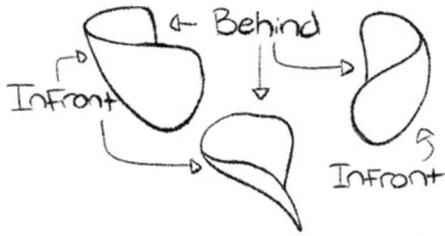

Welcome to the course! Lets start by getting used to our drawing tools by drawing some petal-like shapes.
Flower petals come in so many different shapes that we can play around with them.
Copy from the examples below and draw some more in your sketchbook.

Folds

Flower Drawing Course by JeyRam

Let's draw some petals that look folded. Here we are using overlap to help describe which part of the petal is closer to us. Make sure to use the course video and tutorial page to help you understand this. Copy from the examples!

Layering

Flower Drawing Course by JeyRam

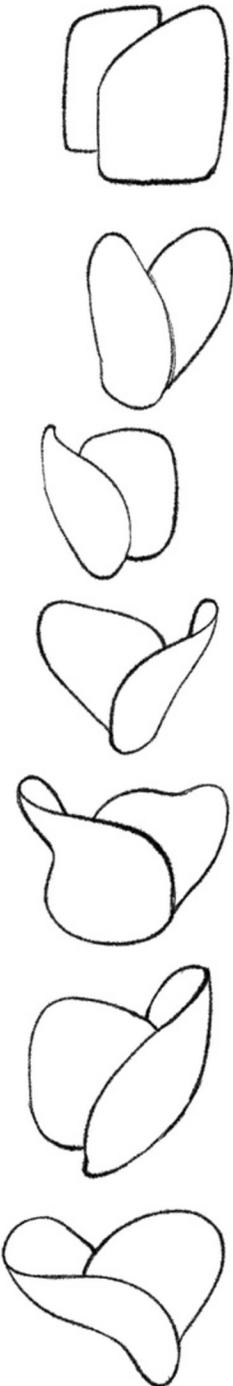

Now we can combine our skills of overlapping and drawing petals together.
Draw two flower petals, one that is in front of the other.
It is usually easier to draw the petal closest to us first.

Attachment Point

Flower Drawing Course by JeyRam

Flowers tend to sprout from a central place, so all the petals attach into the same base. This means that the lines will flow towards this center area. Use the course video to further explain this. Copy from the examples below.

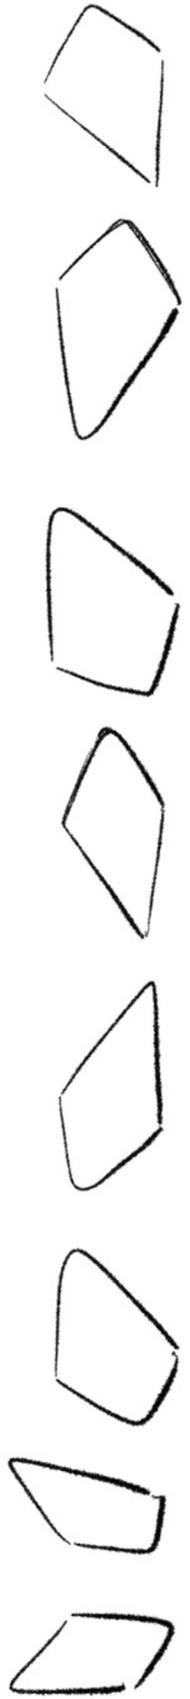

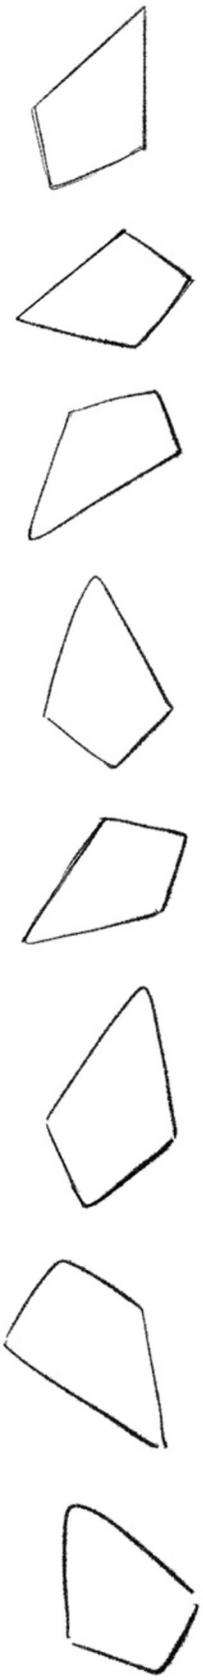

Lines Flow towards the attachment Point

Leaf One

Flower Drawing Course by JeyRam

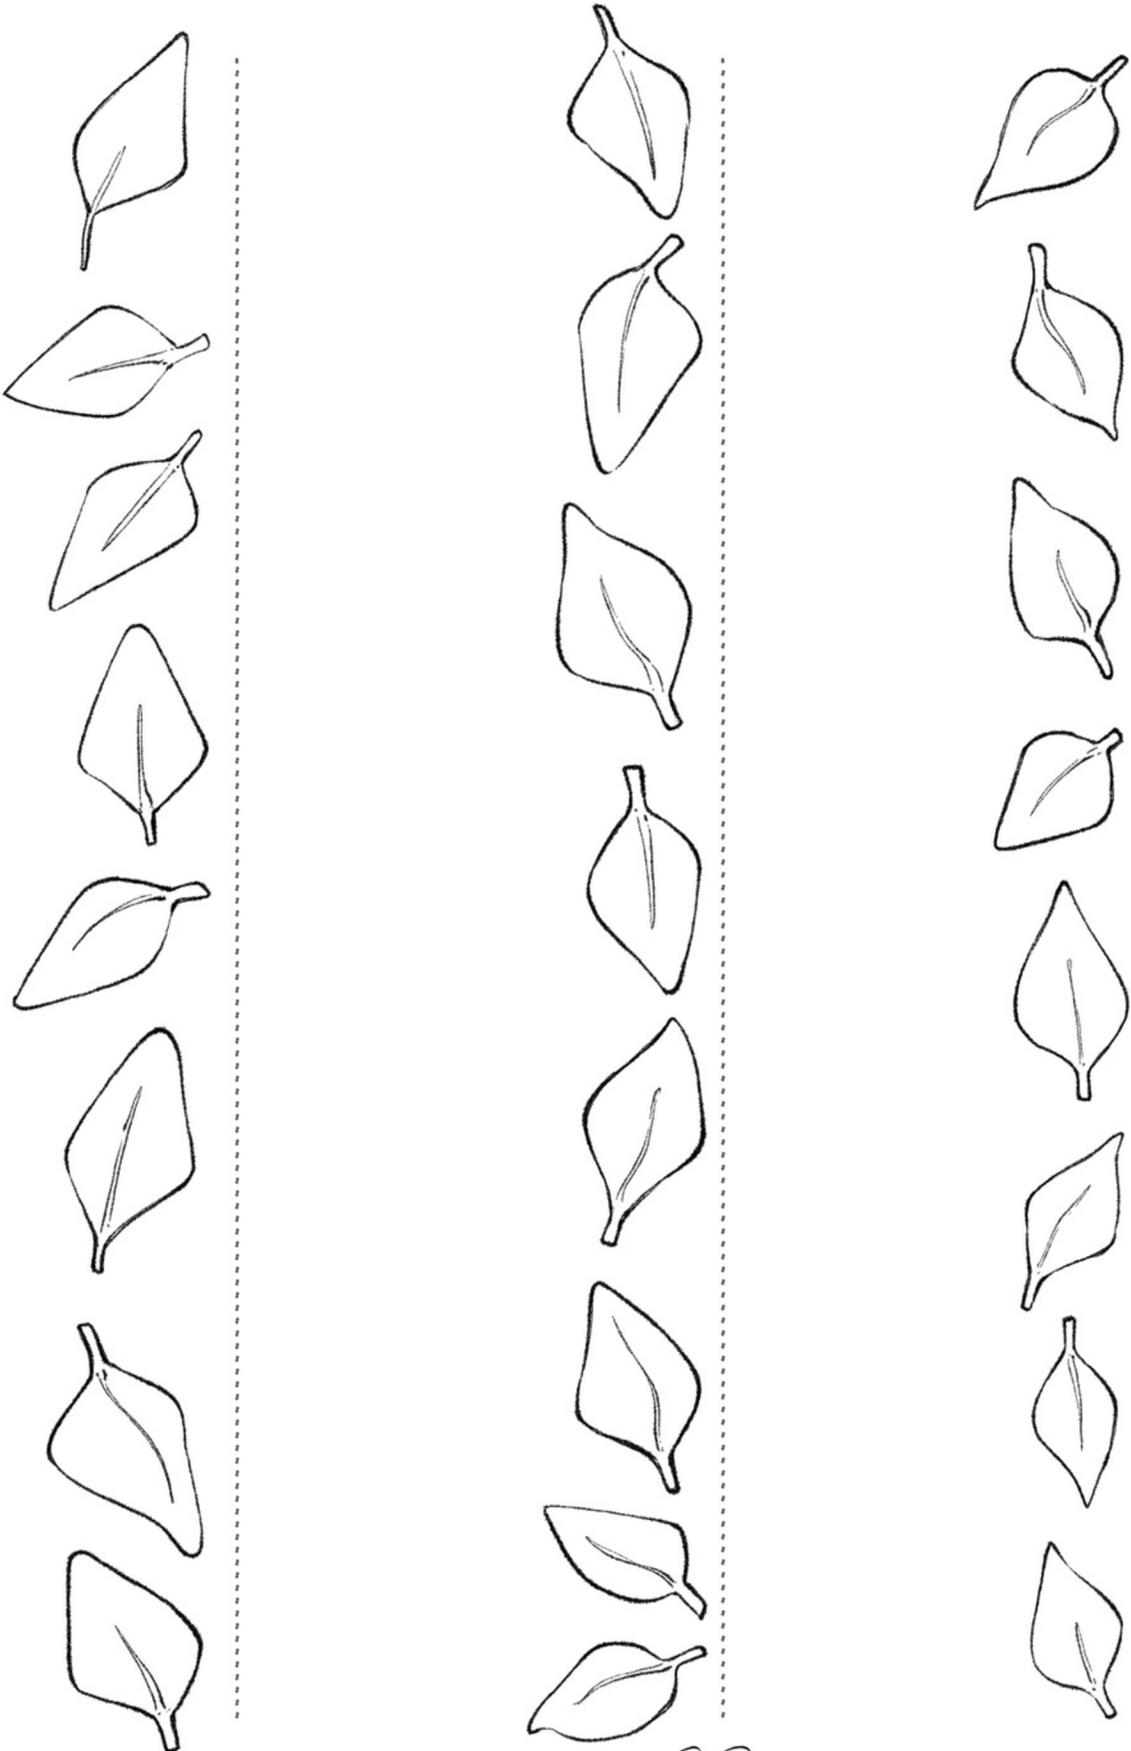

When you simplify most leaves they look somewhat like a diamond shape. Let's practice drawing some diamond shapes at different proportions to better understand how to draw them.

Leaf Two

Flower Drawing Course by JeyRam

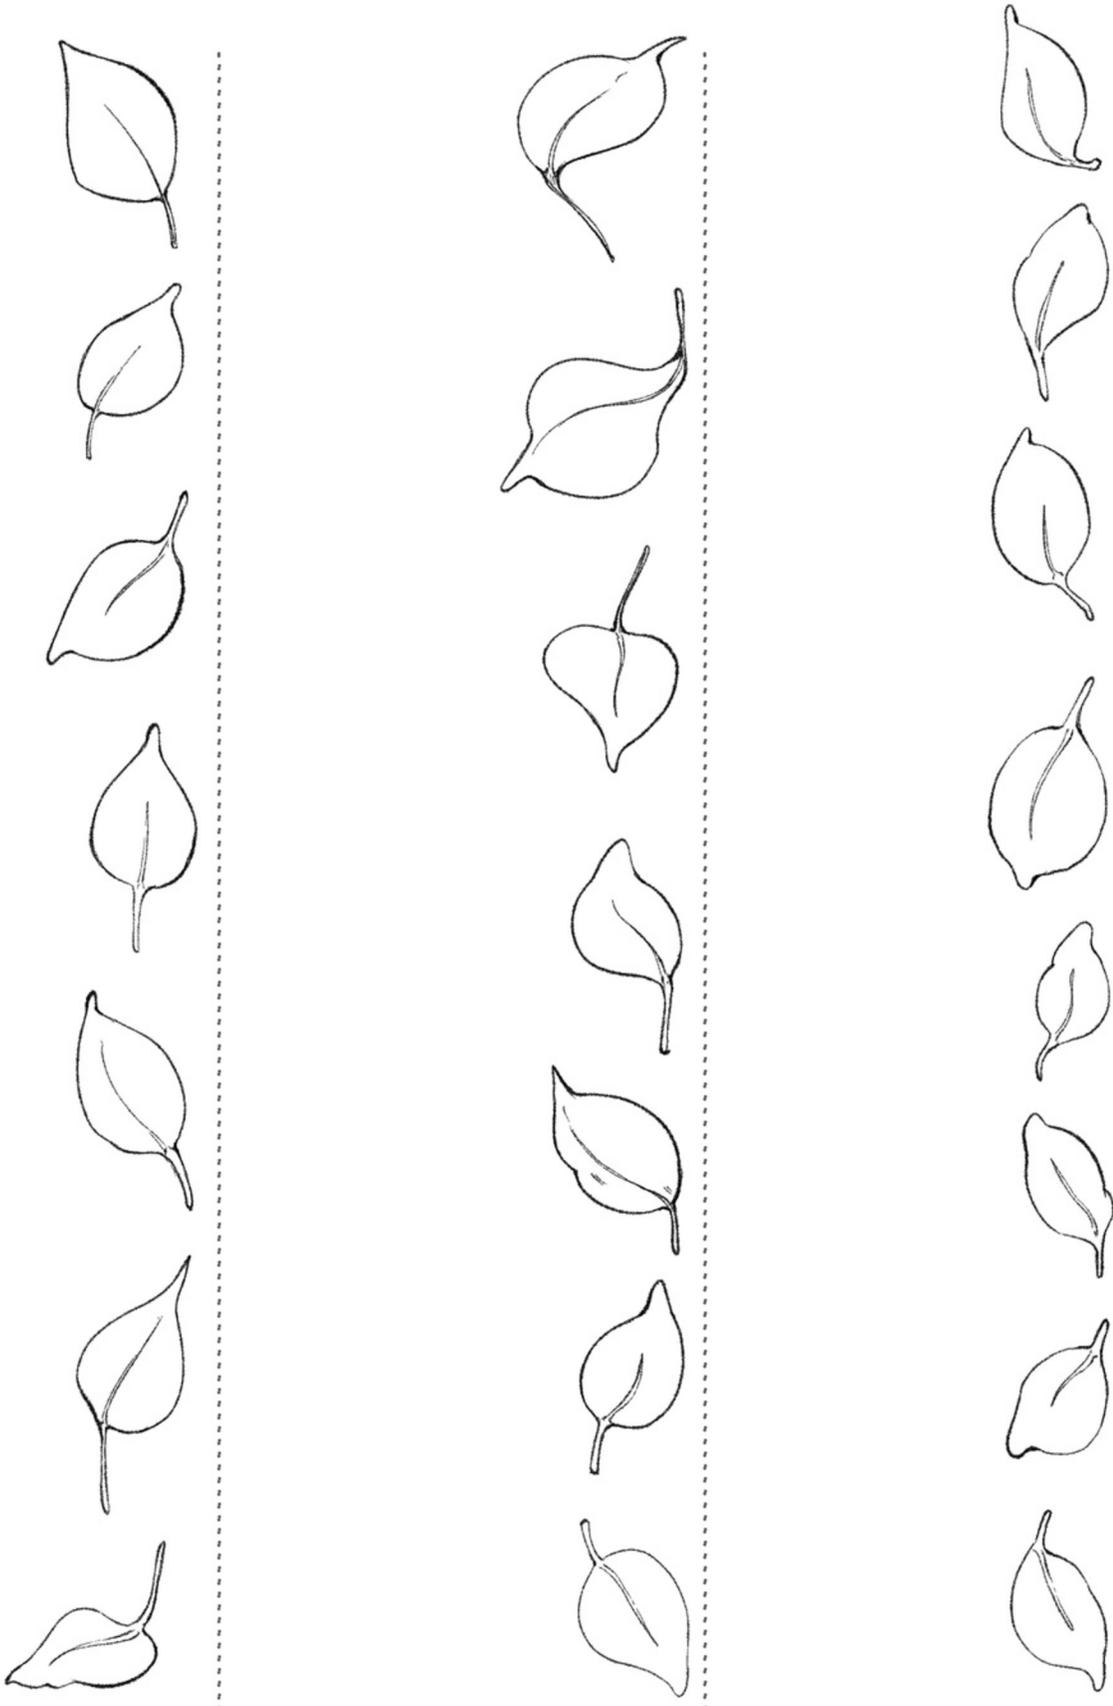

Now let's draw a stem and curved lines in a similar shape to our diamond, this will make the shape feel more organic.

Leaf Three

Flower Drawing Course by JeyRam

We can now take our basic leaf shape and push it even further by adding more curves to it. This is quite challenging if you are new to drawing so take your time and try your best to enjoy the challenge!
